

TTS-01-W TABLE TOP SWITCH

The TTS-01-W decorator assistance call switch is designed to satisfy the need for esthetically pleasing call system devices. The pushbutton switch has an orange indicator flag that appears in the top of the pushbutton when it is in the alarm position. Pushing it again removes the flag and restores the switch to its normal resting state. The wireless transmitter is accessed by removing a screw on the bottom and opening the hinged top. Custom printing for the switches is available at additional cost.
